ISSUES LIST

Name	Description	Type	Severity	Number
Unnecessary imports should be removed	There's no reason to import modules you don't use; and every reason not to: doing so needlessly increases the load. Noncompliant Code Example <code>import A from 'a'; // Noncompliant, A isn't used</code> import { B1 } from 'b'; console.log(B1); Compliant Solution <code>import { B1 } from 'b'; console.log(B1);</code>	CODE_SMELL	MINOR	1
Deprecated APIs should not be used	Once deprecated, classes, and interfaces, and their members should be avoided, rather than used, inherited or extended. Deprecation is a warning that the class or interface has been superseded, and will eventually be removed. The deprecation period allows you to make a smooth transition away from the aging, soon-to-be-retired technology. Noncompliant Code Example <code>export interface LanguageService { /** * @deprecated Use getEncodedSyntacticClassifications instead. */ getSyntacticClassifications(fileName: string, span: TextSpan): ClassifiedSpan[]; } const syntacticClassifications = getLanguageService().getSyntacticClassifications(file, span); // Noncompliant</code> See MITRE, CWE-477 - Use of Obsolete Functions	CODE_SMELL	MINOR	1
